Europe BDEC series of workshops

# International collaboration, BDEC actions and funding agencies relations

### Towards Big data and Extreme computing

- Online questionnaire distributed through the PRACE network and to the National Research Funding Organizations financing ICT topics
- 16 full answers (not homogeneous in terms of content) received so far from Belgium, France, Germany, Italy, Netherlands, Portugal, Romania, Slovenia, Spain, Sweden, Switzerland, UK
- Main outcome (see details in annex):
  - Strong need for collaboration with Europe, Japan and US
  - Exascale plans in every major countries

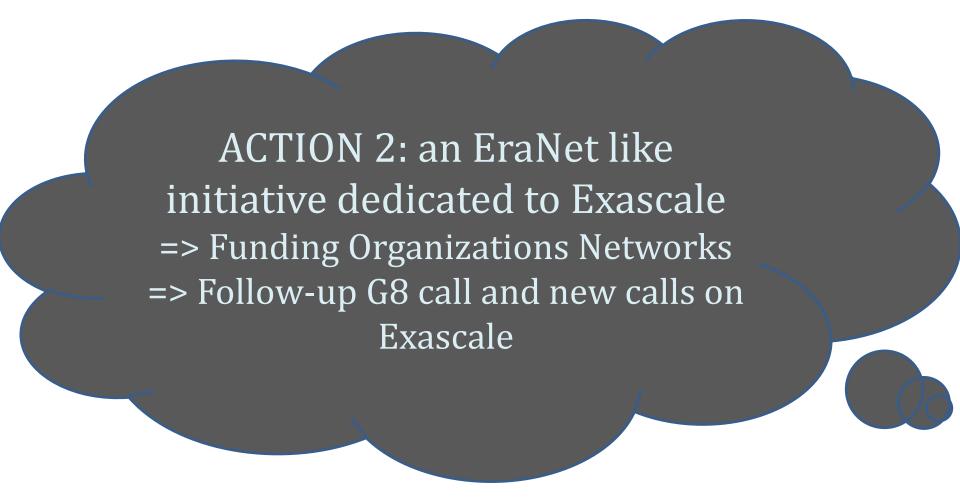

#### But:

- Lack of long term visibility (up to 2020)
- Diversity of answers in nature
- Lack of some important contributions

# International collaboration, BDEC actions and funding agencies relations

#### Some historical context or how to take advantage of existing efforts

- G8 Heads of Research Councils (HORCs) meeting in Kyoto, Japan, in May 2008: Proposal for a multilateral funding activity:
  - Multilateral research projects can address global challenges in ways that are beyond the capacity of national or bilateral activities.
  - The G8 HORCs framework provides the unique opportunity to pilot a new modality for conducting international research.
- Goals: supporting excellent and interdisciplinary research on topics of global relevance best tackled through a multinational approach.
- Research topics defined separately for each call.
- 7 Funding Agencies: NSERC (Canada), ANR (France), DFG (Germany), JSPS (Japan), RFBR (Russia), RCUK (UK), NSF (USA).
- Principles:
  - A common call text with selection criteria predefined together
  - A multinational peer review process in 2 stages (pre-proposals and full proposals)
  - Consortia consisting of partners from at least 3 of the participating countries.
  - National funding according to normal terms and conditions for national project funding.
  - Funding meant for collaborative research, not merely for networking, mobility or quantity

### Preparing HPC Codes and Software for Exascale Computing

#### Mid-term review of the G8 Exascale Projects, November 2012/SC12

- 1. Share the early results of these 6 projects and their impact on science: six projects on climate, earth system, seismic wave simulations, nuclear fusion simulations, dynamics of large biomolecular systems
  - 2. Explore common lessons learned in terms of Exascale research
  - 3. Present early feedback on this innovative multinational collaborative pilot program
- 4. Discuss between funding agencies, PIs and the Exascale community related to the G8 tool: call, award management, cooperation between partners, consortium management <a href="https://www.agence-nationale-recherche.fr/Colloques/G8HORCs-workshop/inscription.php">www.agence-nationale-recherche.fr/Colloques/G8HORCs-workshop/inscription.php</a>

#### Worldwide Collaborations

A unique opportunity to enable collaborations between 3 to 6 different countries (4 projects with 5 or 6 countries):

- making improvement available in all these countries while usual international collaborations are bilateral or regional ones (EC, US, Asia),
- enabling international comparison of great value, leading to some of the most important recent advances in some of the scientific fields funded
- transforming the frontiers, fostering international collaboration, speeding-up the research
- enabling a mix of top world researchers to collaborate
- Education and training: involving an average 10 students / project, providing them a unique opportunity to collaborate and be trained by the best worldwide researchers in the field
- Enabling the access to top worldwide facilities, HPC computers and Big Data.
  - ECS: BLueWaters (NCSA), Intrepid (ANL), K computer (Riken), Tsubame2(Titech), Jugene (PRACE), Marenostrum2 (BSC)
  - NuFuse: BG-Q (DOE-SC's "Mira" @ALCF & NNSA's "Sequoia" at LLNL), K-Computer (Riken), Jugene (JSC); Titan (OLCF); TH 1-A and initial access to TH-2 (China).

A HOPE, the emergence of a "Funding Group on Collaborative Research e-infrastructures as an evolution of the RDA Colloquium. An Europe/US/Australia initiative

Feb. 2015. The objectives of the CRE Funding Group are to identify and pursue opportunities for **coordinated funding of research e-infrastructure** activities in alignment with its mission and the research priorities of its members; to develop and implement a non-binding MOU framework that provides an agreed and consistent mechanism for such cooperative international funding of CREs; and to serve as a forum for discussion and advancement of related policy and practice issues and activities.

Agenda: winter-Spring 2016. Release first pilot funding call(s) and initiate priority activities.

# Funding Group on Collaborative Research e-infrastructures. Feb 2015

=> Follow-up G8 call new calls on Exascale

- The CRE Funding Group is focused on enabling the development of collaborative research e-infrastructures that respond to identified collaborative needs of the research community across national boundaries within and across scientific domains.
- The Group emphasizes multilateralism over bilateralism to promote international cooperation, global community building, convergence and synergy on collaborative research cyberinfrastructures.
- Membership in the Group shall be open to all [funding agencies] interested in investing in the development of transnational CREs and adhering to the Group's principles.
- The Group will seek to complement and cooperate as appropriate with related globally-focused activities from other transnational research e-infrastructure funding groups such as The Belmont Forum E-Infrastructures and Data Management Collaborative Research Action, and with the Group of Senior Officials (GSO) focused on Global Research Infrastructures.
- The Group will serve as a forum for discussing and exploring solutions to practical issues that may arise in connection with its efforts to enable cooperative international funding of CREs. These discussions will be useful to inform the development of policy and legal frameworks.

### Joint DFG/ANR/JSPS call

- Strategic initiative to fund HPC software in Germany
  - Establish collaborative, interdisciplinary co-design of HPC applications and HPC methods
  - Consists of research consortia with central, network-wide coordination
- SPPEXA research is driven by domain science / CSE application, powered by scientific computing / CSE methodology
- ▶ 6 topics: Computational algorithms, System software, Software tools, Application software, Programming, Data management

BDEC Workshop Report (November 29, 2013)

#### Report on the Big Data and Extreme-scale Computing (BDEC) Workshop, Charleston, SC, USA, April 29-May1, 2013

#### 1 Introduction

This report on the Big Data and Extreme-scale Computing (BDEC) workshop offers an initial account of the effort to develop a plan for sustained international cooperation in the design and development of a new generation software infrastructure for extreme scale science. The meeting, the first of a planned series, derived much of its impetus from the earlier work of the International Exascale Software Project (IESP) and the European Exascale Software Initiative (EESI, http://www.eesiproject.eu). The goal of the IESP was two-fold: 1) to produce a plan for a common, high quality computational environment for the peta/exascale systems that are expected to arrive over the next decade: and 2) to mobilize and coordinate the work of the international open source software community to create that environment. BDEC retains those goals but changes the point of view. The EESI coordinated the European contribution to IESP.

The IESP, working through a series of eight international meetings held from 2009 to 2012, built on a range of important earlier studies, including [1-4], to produce a widely read and cited "roadmap" document. The IESP Roadmap [5] presented a multidimensional analysis of the major challenges to be overcome in order to create a software infrastructure capable of supporting exaflop performance on next generation systems, and made a cogent case for the urgency of starting that work as soon as possible. Spurred in some degree by the work of the IESP and its Roadmap, the United States, the European Union, and Japan have, in the past three years, moved aggressively to develop their own plans for achieving exascale computing in the next decade. The EESI produced a European roadmap along with a set of recommendations to address the Petascal/Exascale challenge [10].

The first BDEC workshop marks a beginning of a distinct new phase of this community movement. The motivation for this second stage is based on the recognition that the "digital data deluge." which was sighted on the horizon well over a decade ago [6], has finally made landfall with impressive force. It is apparent that in the era of "Big Data." when every major field of science and engineering is producing. and needs to (repeatedly) process, truly extraordinary amounts of data, the many unsolved problems surrounding wide-area, multistage workflows—the diverse patterns of when, where, and how all that data is to be produced, transformed, shared, and analyzed—have to take center stage. Although the IESP Roadmap shows a clear awareness that extreme scale science inevitably means extreme scale data as well as extreme scale computing, IESP working groups, for the most part, adopted a traditional HPC (i.e., supercomputer centric) perspective. They were largely (and understandably) preoccupied by the impending software crisis caused by the move to the new paradigm in hardware and systems architecture a paradigm that demands orders of magnitude more parallelism, places unp energy consumption, and requires resilience to faults occurring at far his US - Japan -Data-driven workflow issues received some collateral discussion in # **Europe BDEC** attention for the IESP was on the revolutionary innovations in the series of

**Focus:** An international workshop on the post-Peta path forward to extreme scale scientific computing, taking into account the full range of complicated issues that the community confronts in the era of **Big Data**.

\*: Japanese pre-BDEC workshop, US and Europe invited

#### 3 – BDEC Workshop, Barcelona, Spain, January 28-30, 2015

Focus: how major issues associated with Big Data potentially change the national and international plans that are now being laid for achieving exascale computing.

### Discussion topics:

- Full data life cycle in the context of Exascale
- In-situ data analysis and visualization
- Data management and provenance
- Mining and curation of the multi-Petabyte heterogeneous data sets generated by experiments and simulations
- Extreme-computing algorithms for data analysis
- Performance analysis and productivity tools
- Validation of computer models and models' uncertainties
- Energy-efficient computing,
- New data architectures compatible with HPC
- Machine learning, and data analytics
- How will HPC centers change to support big data?
- Are the cross cutting issues different here than for Exascale (Concurrency, Energy, Resiliency, Heterogeneity, I/O and Memory)?

#### 3 – BDEC Workshop, Barcelona, Spain, January 28-30, 2015

Attendees: >100 people, 40% Europe&Russia, 30% Asia (Japan, China, Singapore, Korea), 30%US

January 28: BDEC for Europe meeting, specific focus on European strategy, research agenda, projects and initiatives.
